**Abstract of WO2004111812**

A system and a method for text entry is disclosed. Each may be practiced using a single finger or thumb to create, select and enter characters or character sequences. The invention may be broadly applicable to the entry of a text object or a text string which may be created or received, stored, edited or transmitted by a personal appliance having a limited user interface, such as a reduced keypad or no keypad. The invention may be particularly useful in conjunction with an ideographic language.
